Spreading Relations Rather Than Chemicals: Biodiversity As Seen From Melanesia

Agronomists who studied Melanesian gardens were surprised by the diversity of the plants which grew there. Their findings seemed important to me in today's context where drastic reduction of species diversity appears as a recurrent phenomenon over the whole planet. I therefore set out to understand how and why Melanesian garden diversity was preserved for centuries.

Tuesday, 3rd of May

Time: 17:00 ct. – 19:00 ct.

Location: South Asia Institute,
Lecture Hall (010.01.05), 1st Floor
